PROFESSIONAL SUMMARY

A highly skilled software developer with extensive experience in server-side technologies such as PHP, Java, and Swift, complemented by proficiency in client-side languages including JavaScript, HTML/CSS, and Liquid for Shopify. Demonstrates expertise in frameworks like Laravel for bespoke system development and Vue.js for frontend enhancements. Adept at managing web servers and domains using platforms like CPanel, Digital Ocean, Cloudflare, and AWS. Skilled in mobile app development with Android Studio and cloud infrastructure management with Azure. Committed to delivering innovative solutions through advanced tools such as Power BI for data visualisation and Business Central for workflow optimisation.

WORK HISTORY

Web Developer, 02/2021 to Current
Netmatters
In 2021, I joined Netmatters on a permanent contract. My roles in the team have included tech leading projects, delivering under tight deadlines, providing long-term support for retainer clients, and working across a diverse tech stack. Some of the technologies and projects I've worked with include:

- Managed a bespoke **multisite web platform**, developing frontend features using **Vue.js**, and building a **custom EDI**, **internal API**, and a **delivery tracking system**.
- Maintained and enhanced a **Java-based stock management system**, including API integration for syncing product data across multiple ecommerce platforms.
- Migrated legacy websites to **Shopify**, handling full **product/content imports** and theme customization using **Shopify CLI** and bespoke components.
- Updated outdated ecommerce sites with **modern Shopify themes**, improving performance and maintainability.
- Helped build a **custom WordPress site** using **Bedrock**, **Advanced Custom Fields (ACF)**, and **Tailwind CSS**, contributing to key areas such as shop, news, and donation pages.
- Delivered content updates and provided maintenance on large **WordPress multisite builds**, including server migration and integration with ACF.
- Developed a **custom inheritance tax calculator**, integrating it with **Gravity Forms** on a financial services website.
- Supported complex **Azure integrations** and built **Power BI reports** using data pulled from **Microsoft Business Central**.
- Performed ongoing **server configuration and maintenance** using **cPanel**.
- Created **web design prototypes** in **Figma**, aligning with client requirements prior to development.

Web Developer, 08/2020 to 01/2021
Snap Digital
Between 2020 and 2021, I worked at Snap Digital, a startup where I

- **Figma, Photoshop, Illustrator, Inkscape** – Creating and adapting design templates for client sign-off.

contributed to several engaging web development projects. These included:

- **Oyster Recruitment** – Laravel-based build from scratch.
- **Airtel Vodafone** – Developed a custom GST Tax Calculator.
- **Thompson Estates** – Assisted with the rebranding and relaunch of their website.
- **Snap Digital Website** – Updated the main site and added a blog (WordPress).

Web Developer, 09/2016 to 06/2020
365 Tickets
My responsibilities included:

- Debugging and maintaining and adding new features to the multisite architecture.
- Building white-label sites using the 365 Tickets framework.
- Maintaining a Laravel based custom ticket scanner app.
- Creating and leading project build on a multisite WordPress blog.
- Assisting with general IT support and debugging.

Note: The company unfortunately went into liquidation in 2020 due to the COVID-19 pandemic.

EDUCATION

Bachelor of Arts: Digital Design, 09/2013 – 06/2016
Bournemouth University - Bournemouth - 2nd Class Honours
Graduated with a Second-Class Honours (2:1) degree. During my time at university, I led and contributed to a range of real-world digital projects, including:

- **Salisbury Cathedral App** – Lead developer on a mobile app built using Swift.
- **Meat Consumption Calculator** – Developed a web tool for calculating the environmental impact of meat consumption.
- Participated in various collaborative and client-focused projects with real deliverables and user requirements.
